Insider Tips and Secrets to Get The MOST Out of Your Computer

SEPTEMBER 2011 — VOL 8 — ISSUE 9

Business Owners: If Getting Email Anytime, Anywhere, On Any Device WITHOUT Any Downtime Is Critical To Your Business, Read On...

Are e-mail communications seemingly the lifeline of your business? Would your productivity grind to a halt if your e-mail communications were cutoff for any time at all? Are you tired of new hardware and software expenses and the endless maintenance just to keep everything up to date? If so, I've got some great news for you.

Cloud based e-mail (aka "Hosted Exchange") is often a much easier way of eliminating e-mail downtime, slow performance and annoying spam messages. Here's how it works: Instead of you purchasing and maintaining your e-mail in house which can be costly and time consuming, your e-mail server is hosted (and maintained) in a high-performance, high-security hosting company "in the cloud" where you can access it securely from any device or PC.

Best of all, you don't have to make any changes in HOW you access your e-mail – your messages will simply be delivered to your inbox, phone, or other device faster and with fewer issues, and will always be synchronized and up-to-date!

Here are just a few of the advantages:

- Synchronized access to your e-mail and calendar from anywhere. You don't have to remote into your office PC; now you can securely access your e-mail from any device or PC.
- No more software, hardware or maintenance costs. YOU don't have to purchase the hardware and software, nor do you have to maintain the system. This is all included in a very low monthly fee.
- High speed, "always on" e-mail. The Hosted Exchange platforms we provide our clients are high-performance systems with multiple "fail over" backup servers, maintained and monitored like Fort Knox; something you wouldn't need for your small business. However, since you are hosting on this platform, you get all the benefits of a high-performance system without the costs. Your in-house network could go down and you'd STILL have access to your e-mail, contacts and calendar.
- Automatic backups and archiving. What would you do if your in-house e-mail server failed and erased your messages? Or what if a disgruntled employee deleted all their e-mails? If you were hosting your Exchange, these would be non-issues since your e-mails are backed up daily and secured.
