Velocity Technology Security Awareness Training

The Need for Security Awareness Training

As the global incidence of online fraud, social engineering and general cybercrime intensifies, it is increasingly important for digital users to be aware of the common online threats and of ways in which to defend the organisation and its staff against them.

The primary vector for these attacks is the 'spoof' fraudulent email to an unsuspecting user inviting some further action – this simple means of engineering an entry to a company's network and online activities now accounts for over 94% of the attacks on businesses and targets the most vulnerable link on the security network – the end user. Having your staff recognising these attempts to gain access to data or to steal information is paramount to protecting your organisation from harm.

Security Awareness Training

Security Awareness Training is the process of educating users in the workplace regarding the various, and increasingly numerous, threats that now populate the digital space – threats aimed at them and through them to the organisation. It addresses the processes and best practices to deal with attacks directed at the individual, the most common target. It aims to educate users in the key risk factors of data security and on-line privacy; to increase awareness of social awareness tactics; to increase user confidence in identification of the common threats and how to respond accordingly; and to reduce the levels of risks associated with cyber security and information technology.

Benefits of Security Awareness Training

- Reduced Malware Infections
- Reduced Data Loss
- Reduced Potential Cyber-theft
- Increased User Productivity
- Users Have Security Top of Mind

Velocity Technology

Velocity Technology is a leading IT and cybersecurity solutions provider in Hong Kong and SE Asia, having, since 1998, successfully built and managed secure and robust IT infrastructures for the regulated financial service industry and an excellent track record in cybersecurity, cloud technologies and IT infrastructure design and management.

Our experience enables us to deliver Security Awareness Training services of the highest standard and provide your staff with state-of-the-art training that will assist them in discerning the real from the malicious.
