## MXOtech Launches New Phone Service Offering

**CHICAGO, IL – February 25, 2014.** MXOtech is now offering its clients the most versatile, reliable and affordable business telephone system available, Cloud-based VoIP.

There are many benefits to switching to a Cloud-based phone system. In addition to the cost saving benefits of VoIP, which can be as much as 60% off your monthly phone bill, VoIP has many more diverse features than a traditional phone system. A VoIP phone system allows for the freedom to answer phone calls anywhere; making connecting to remote offices and employees a breeze. The unified system ensures communication in the workforce is as simple as possible, leading to higher user productivity. Once implemented, a VoIP system will never have to be replaced; it has the ability to scale up or down demanding on business demands. Over 150 enterprise class features come standard.

MXOtech recently upgraded the phone system of long-time client Dennis Wholesale Food and Paper. According to President Mike Thiakos, switching over to the cloud based system was the best decision he made for this new office location:

*"I was in shock over the \$14,000 estimate I received to replace my traditional phone system in my new office. When I spoke with Joanna, she suggested I consider a **VoIP system** instead, plus she thought she could save me money. Well, imagine my surprise when she got back to me with a quote of just \$3,000 to replace my entire system with a cloud based solution – **that's \$11,000 in savings!** I couldn't be happier with the new system. The quality is better and it has more diverse features than a traditional phone system. Everything is integrated and can be accessed all in one place at no additional cost. Voicemail and faxes are now received in an e-mail inbox which can be seamlessly shared by all my employees, in a way that centralizes the task of processing our orders."*

To learn more about how MXOtech can help you transform your business with hosted VoIP, give them a call at 312.554.5699 or find out more online at [www.mxotech.com/getvoip](http://www.mxotech.com/getvoip).
