

NAS

Smart Scalable Storage connected to the Cloud.

5nines NAS is smart, scalable storage that connects to the secure 5nines cloud. It takes the NAS performance to the next level, adding snapshotting and syncing to the cloud.

NAS: Smart Scalable Storage connected to the Cloud

Brand new for 2014, 5nines NAS is a smart hybrid cloud storage solution with snapshotting. 5nines NAS is no ordinary network-attached storage. As users share documents, it takes snapshots of their data so they can easily roll back to previous versions of anything being worked on. All data syncs to the secure 5nines Cloud so it is always accessible, even in the event of a disaster.

“

5nines NAS is perfect for law firms, schools, and small businesses that need flexible storage for documents and media.

”

Introducing 5nines NAS

5nines NAS units come with storage capacity ranging from 500GB to 24TB.

You can deploy the 5nines NAS unit that fits your needs today, then upgrade later to a larger size. All models have hot-swap drive bays so upgrades may be done right in the field.

5nines NAS is perfect for law firms, schools, and small businesses that need flexible storage for documents and media. Incremental snapshots can be taken as often as every five minutes, so you can go back to a previous version of a file or folder instantly.

A simple wizard-based interface makes 5nines NAS incredibly easy to set up and manage. 5nines NAS preserves all Windows permissions so users only have to set security policies once.

5nines NAS is available in a 4-bay unit with models in capacities ranging from 500GB to 3TB. A second line, 5nines NAS Professional, puts this hybrid cloud solution in 8-bay units ranging from 6TB to 24TB.

All 5nines NAS devices come with a solid state operating system drive for superior reliability and RAID for redundancy.

NAS: Smart Scalable Storage connected to the Cloud

Snapshotting

5nines NAS lets you set up a custom schedule for capturing snapshots of your data. Recovering a previous version of a document is quick and painless, whether you're at the office or on the road. (See Figure 1)

Figure 1

Hybrid Cloud

5nines NAS utilizes the same Hybrid Cloud technology 5nines has perfected in its business continuity solutions to provide bulletproof protection for your NAS data. Snapshots of the 5nines NAS are replicated to the 5nines cloud, so if there is a local disaster like a flood and the 5nines NAS is destroyed, you have a back-up copy in the secure 5nines cloud. (See Figure 2)

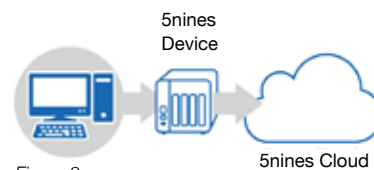

Figure 2

Hot-Swappable Drive Bays

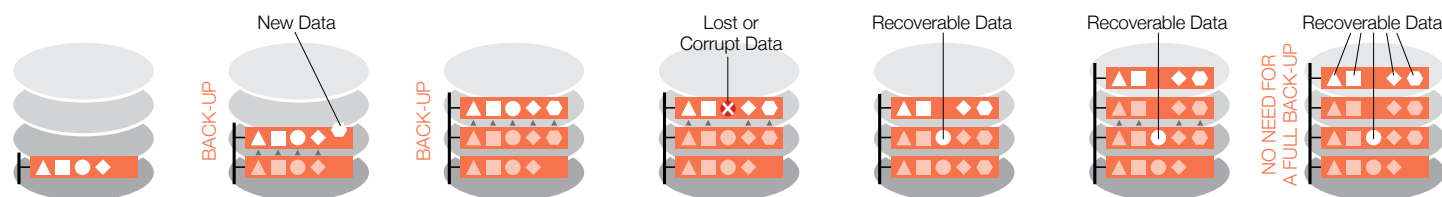

All 5nines NAS models are field upgradeable, making the 5nines flexible upgrade policy even more convenient. Since all units feature hot-swap drive bays, it's simply a matter of dropping new drives in, no device swap needed. Now businesses of any size have a solution that can grow as quickly as they do. Find exactly what you need.

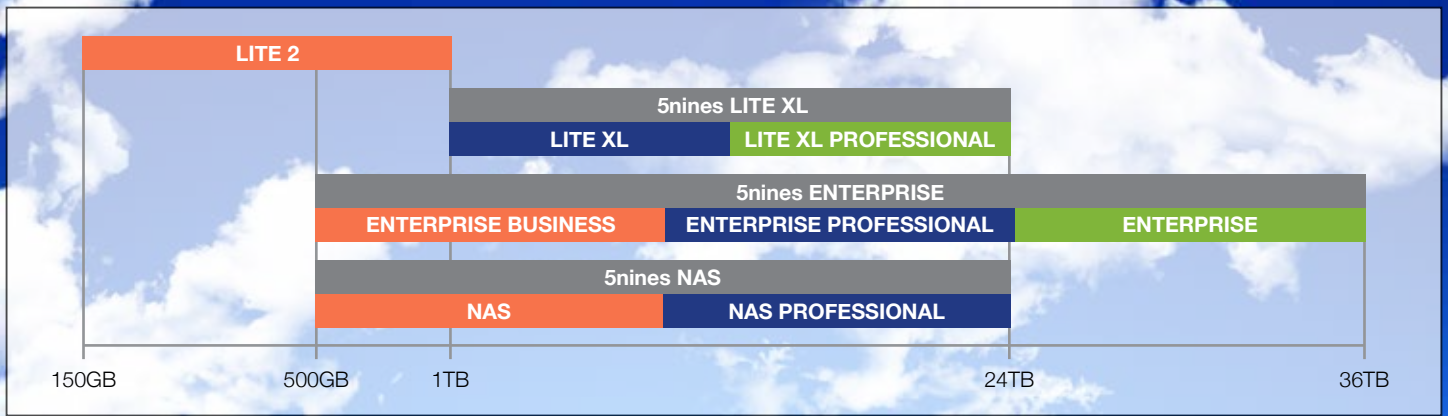

Inverse Chain Technology™

5nines proprietary Inverse Chain Technology eliminates the problem of broken back-up chains - the place where most issues arise in the back-up process.

Each time a back-up occurs data is saved in a universal virtual file format (VMDK). These back-ups are not dependent on previous snapshots, giving you the freedom to change retention and delete snapshots without resetting the chain or having to take a new base image. Since each back-up is a fully bootable virtual machine, there is no need for complex, time-consuming conversion processes before performing a restore. Data is always available immediately, both on-site and off-site, for near-instantaneous recovery and virtualisation. (See Figure 3)
