

How to Handle Server and IT Relocation with Ease

How to Handle Server and IT Relocation with Ease

What's the biggest challenge when relocating servers, IT equipment, or entire data centers?

More often than not, the biggest challenges involve organizations not knowing who they should or shouldn't rely on to handle such a complex project. While an organization could handle moving their IT equipment and data centers on their own, working with IT professionals like myIT.com helps to avoid overloading internal resources. The benefit of having dedicated experts to help you move can help accelerate the project, reduce risk, and guarantee everything is reinstalled and reconfigured how it's supposed to be.

Your company can handle any server and IT Relocation with ease by following three steps to ensure a successful and smooth transition.

THE DISCOVERY PHASE

Well before a strategic plan is put together and presented, an IT Professional will need to do an audit of your existing IT infrastructure and what will need to be moved. This goes beyond just your computers and server equipment. The technology audit will include taking note of your communications equipment such as phone systems, any large office equipment such as printers and copiers, as well as the required cabling. Once the audit of your existing IT infrastructure is complete you can then move onto the planning phase.

ANALYSIS AND PLANNING

Understanding the total scope of any Server and IT Relocation project is critical to the planning phase. Being able to properly analyze the technology audit performed by IT Professionals will help to develop a comprehensive plan around what actually needs to be done. The details of the plan, whether done internally or provided by an IT Professional, will outline exactly what IT equipment is being moved, how it's to be moved, how long the project will take from start to finish, and total cost.

EXECUTION

With a detailed plan in hand, following through with the Server and IT Relocation project should be as smooth and stress-free as possible. Your organization knows exactly what to expect, allowing IT Professionals to execute the developed plan accordingly. The execution phase is where most of the heavy lifting is done. It's also the smoothest part of relocation when proper time is invested into discovering what needs to be done and planning very specifically how to accomplish it.

If you are in need of Server and IT Relocation services, look no further than myIT.com and their team of dedicated engineers with decades of IT Relocation experience.
