PC Fix has established a new name in cyber protection: Tech Mafia
Introducing the new managed business IT and cyber security division of PC Fix

Seattle, Washington – PC Fix, a leading provider of computer repair and IT services in the northwest, is pleased to announce Tech Mafia, a new division created to highlight their managed business IT services. PC Fix has been providing the greater Seattle area with an array of computer related services for over two decades and will continue to offer consumer repair alongside their business services. Data protection and cyber security have become increasingly crucial for all businesses, and Tech Mafia is dedicated to providing those essential services.

"PC Fix has been providing business related services from the beginning," says CEO Todd Blair, "but we wanted to make sure it was clear that we do more than just computer repair. We also wanted our business clients to have a dedicated division of our company focused on their services." Business cyber security has become as important as business insurance. One of the key functions of Tech Mafia is getting businesses up and running with as little interruption as possible after a network or data gets hacked, due to the monitoring and backups they put in place.

PC Fix will remain the consumer computer repair business while the managed IT services customers will transition to the Tech Mafia division. A refreshed website with Tech Mafia branding is the just start of the exciting new features PC Fix and Tech Mafia will be bringing to their clients this year.
