Four Important Policy Changes

It can be overwhelming to go from having no concrete policies to having a list of rules and procedures employees must follow.
These four changes will give you a good head start.
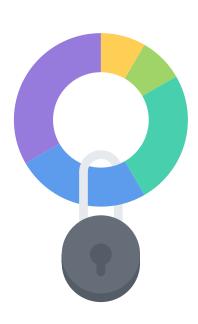

Start With Password Policies

01

Passwords are a good place to start when implementing policies. Set rules for password length and complexity within your business.

Use Of Firewall/ Anti-Virus

02

Firewall and anti-virus use throughout your business should be standardized on office devices.

Use Of Backups

03

Backups are an excellent place to start when implementing security policies. On Windows devices your employees have access to Microsoft OneDrive and cloud backups are an option for your company servers.

Cybersecurity Training

04

Another easy thing to implement is cybersecurity training. Training can be delivered in bite-sized video doses that are easy to fit into their day. You can even reward employees for partaking in the training and enhance your company culture with the shared experience.
