

# CHANGING IT PROVIDERS

One of the biggest concerns our clients have before they start services with us is how to handle notifying and making the switch from their current IT. It doesn't matter why they're switching or how the service they've received has been, there's always some concern and hesitancy in letting their existing IT know they need to make a change. Here is how Valley Techlogic provides a worry-free experience when you switch to us.

## WE PROVIDE THE LETTER

It can be hard to compose that letter letting your existing IT know you'll be switching services, that's why we've created a neutral template you can use.

## WE WORK WITH THEM

We find that when we are willing to work with the existing IT provider they're in turn willing to work with us, we're all professionals in the same business after all.

## THOROUGH ONBOARDING

We offer a thorough onboarding period where we learn your business and the items that are important for you when it comes to receiving service from us.

## COVERED FROM DAY 1

We don't wait until your existing IT is out of the picture, when you start with us you're covered by us from day one, meaning you can call for assistance any time, any day.
