

BUSINESS COMMUNICATIONS

Fluid Networks has your communications covered.

From Cloud and Onsite VoIP phone systems, to Room-based and Personal Collaboration systems, from fast, reliable internet, to stable, inexpensive Voice lines. Fluid Networks has the expertise to guide Small and Medium Enterprise clients into the best combination of communication technologies.

Fluid Networks has been delivering Voice and Data solutions for more than two decades. We understand Converged Technology better than most. Our experience includes partnerships with myriad cloud and premise-based VoIP system providers, Fiber, cable and wireless broadband companies - we even started up an ISP of our own right here in Southern California.

Unlike many IT Services firms, we embrace the opportunity to simplify the complex world of business communications for our Small and Medium Enterprise clients, which we do by offering an array of feature-rich, straightforward, and budget-friendly packages.

SOLUTIONS FOR SMALL OFFICES AND LARGE MULTI-SITE NETWORKS.

- ✓ LAN, WAN, VPN, and WiFi network design
- ✓ Cost-saving, feature-rich, Cloud and On-premise VoIP phone systems
- ✓ Trusted brands like Mitel, Panasonic, Polycom, and more
- ✓ Cloud, mobile, and office-based video
- ✓ Web-based Collaboration
Conferencing on-demand
- ✓ Tailormade, unified telecom schemes to meet your specific needs
- ✓ Partnerships with leading local and national carriers

BACKUP & DISASTER RECOVERY

VISIBLE-DP for Data Backup and Protection, and VISIBLE-ARCHIVE for Historical Email Reference combine to ensure your critical Servers and important Corporate Information are kept trim and able to be brought back online in minutes, not days, after a Disaster or System failure.

Backup and Disaster Recovery

Losing Data you've been working on since the morning may ruin your day, losing Data on a grander scale, such as a Server crash wiping out your Accounting Records, might ruin your entire business. It is, therefore, imperative you adequately protect your important files by implementing a secure, cloud recovery system which is fully managed and dependable when you need it.

VISIBLE-DP is a fully managed, appliance-based, local onsite and Cloud-replicated backup designed to protect your business against data loss in the event of a system failure, local site or regional disaster or Ransomware attack. All you need to do is provide basic information about your Servers, and then Fluid Networks takes care of the rest.

Email Archiving

VISIBLE-ARCHIVE is our fully managed, cloud-based email archiving solution which allows your historical email to be always available while keeping your actual inbox lean and clean. This brings down the cost to maintain your email system, provides access to email when Servers fail, maintains legal and compliance requirements, protects against user deletions, and significantly shortens the time to recover by holding historical, unchanged data in a separate repository available from anywhere.

MANAGED IT SERVICES

Today's highly critical, distributed IT systems require a proactive management approach to ensure proper availability, reliability, and performance. Fluid Networks will holistically manage all your IT systems, creating a cohesive experience between your users, network, and applications.

When Fluid Networks is managing your IT systems, you are freed from the hassles of dealing with an ever-increasingly complex IT environment, so you're able to focus your attention where it should be, pleasing your existing customers and earning new ones.

Managed IT services are a predictive, proactive technical support model that ensures your users have fully-functioning IT systems always. No more crashing Servers, lagging WiFi or slow Internet service, no more glitches which serve to destroy your users' productivity costing your business money. Now, just enjoy a modern, safe and secure IT environment, so your teams may stay productive from anywhere, any time.

WHAT DO MANAGED IT SERVICES ENTAIL?

- ✓ A nearly "failure-free" computing environment
- ✓ Around-the-clock protection from viruses, spam, and phishing attacks
- ✓ Constant supervision of PCs, laptops, servers, and networking equipment
- ✓ Complete management of your software applications and operating systems
- ✓ State-of-the-art backups of your precious customer, accounting, and HR data

CYBER SECURITY SOLUTIONS

Attackers are relentless, and new vulnerabilities are being exploited every day. Without robust defense systems at all levels inside and outside your IT environment, you're leaving your business and your users open to theft, data loss, or worse.

Fluid Networks provides cyber security solutions that are constantly evolving to keep pace with attackers and are fully managed by our team of IT and Network Security experts. Our tools, fully deployed and fitted to the way you use your network, will keep you protected against the latest internet threats by leveraging security technologies at all levels of your network - edge, email, server, PC, Mac, Browser, mobile device, cloud and beyond.

This comprehensive approach ensures your users are safe to use the internet every day, and if (when) a large-scale outbreak occurs, our team is able to proactively work to ensure malware and viruses do not gain a foothold in your network. Our unique combination of day-to-day protection, monitoring and remediation technologies, along with our quick response to new outbreaks makes Fluid Networks an ideal network security partner for your business.

EXHAUSTIVE ANALYSIS AND CLOSE MONITORING OF RISKS, THREATS, AND COMPLIANCE REQUIREMENTS.

- ✓ Continuous network and database testing
- ✓ Managed firewalls and endpoint protections
- ✓ Security awareness and best practice training
- ✓ Email surveillance with robust encryption protocols
- ✓ Software application scanning and malware monitoring

CLOUD ENABLED OFFICE™ C.E.O.

Significant Savings

Cloud computing is the most effective way to defer, or eliminate entirely, the tremendous and increasing costs tied to owning hi-tech hardware and software. The Cloud delivers uptime and availability in-house solutions can only dream of, at a fraction of the cost of building and maintaining it yourself. With the Cloud, it's possible to have your cake and eat it, too...

Streamlined Collaboration

Putting the Cloud to work as your Central Collaborations Hub allows your teams to work in concert over voice, video, screen-share, and white-board from a personal or room-based device from basically anywhere. No more limits, no more walls...

VoIP Telephony

Cloud-based Voice-over-IP systems add flexibility and resiliency to your overall telephone communications. Make a distributed workforce seem as if they're all in the same office. Cloud VoIP presents its own unique challenges, but Fluid Networks, with decades of experience, has been doing it longer and better than most!

Office 365

Cloud-based productivity suite, fully managed by Fluid Networks, brings together Microsoft's renowned productivity suite - Word, Excel, Outlook, etc - with powerful Cloud services such as OneDrive, SharePoint, and Microsoft Teams, so your workforce always has everything they need from anywhere on any device at any time.

Azure and AWS

Microsoft's Azure and Amazon's AWS Global Cloud Services provides the ideal framework to help your organization meet and overcome your business' challenges. Similar, yet each with its own strengths, Azure and AWS offer trusted Cloud environments for businesses to build, manage, and deploy sophisticated applications with enhanced flexibility, scalability, and reliability.

MOVING TO THE CLOUD GENERATES SIGNIFICANT SAVINGS ON IT OPERATING COSTS, PLUS MANY OTHER BENEFITS.

- ✓ Improved workforce mobility
- ✓ Increased employee efficiency
- ✓ Reduced payroll for technical personnel
- ✓ More money for wage increases and product innovation
- ✓ Higher availability of IT staff for revenue-generating projects
