

# LIFT-O-FLEX® *By* **RONI**

**Roll Rotated  
Anti-Telescopic Device Released**

**Roll Removal or Placement into Cartons**

The **Anti-Telescopic Attachment™** is designed to work on the **Expand-O-Turn®**. The attachment is used to stabilize the outer wraps on rolls that tend to telescope. The **Anti-Telescopic Attachment™** is manually operated and offers the user the ability to stabilize rolls prior to them being rotated for placement onto spindles.

The **Anti-Telescopic Attachment™** can be used with either the manual or electric powered **Expand-O-Turn®** for standard or custom sizes and will safely and ergonomically handle rolls of various sizes.

The **Anti-Telescopic Attachment™** is simple to use and will not damage the roll surface. It is also designed to be ergonomically correct in order to eliminate the difficult and unsafe conditions commonly encountered during roll handling operations.

When designing the **Anti-Telescopic Attachment™** we looked at not only the problem of telescoping rolls but designed the unit so that it can assist in operations where space is at a premium. Loading and unloading rolls that telescope from cartons is one problem that can now be safely and ergonomically addressed. When used with the **Expand-O-Turn®** one person can now safely perform these functions efficiently.

**12108 Series Anti-Telescopic Attachment™**  
**Designed for LIFT-O-FLEX® Lift Systems**
