Our Mission:
To create and build professional,
valuable and exceptional
relationships with our clients; to
develop and implement the most
appropriate and effective
technology solutions and
processes.

Over the past few years, instances of cyberthreats have increased at an alarming rate, and they don't seem to be slowing down anytime soon. Awareness around cyber security has certainly improved over the past year, with 9 in 10 Americans stating that they are somewhat concerned about hacking that involves their personal information, financial institutions, government agencies or certain utilities. But while awareness has increased, so have the rates of cyber-attacks.

Last year, people had more data breaches from January to October 2021 than in all of 2020. As we continue through 2022, there's no reason to assume this year will be any different. In order to ensure that your business is protected this year and every year after, you should take the proper precautions regarding cyber security. If your business falls prey to a cyber-attack, you risk tarnishing your brand's reputation and will have customers questioning whether it's safe to do business with you.

Below are a couple of the best cyber security practices you can put in place to fully prepare for cyberattacks and threats.

HIRE A MANAGED SERVICES PROVIDER

Small and mid-size businesses have seen an increase in cyber-attacks since 2018, but larger corporations are no exception for hackers. The NBA, Kia Motors and the Colonial Pipeline are just a few examples of big businesses that fell victim to cyber-attacks last year. No matter if your business is big or small, hiring

an MSP is the most affordable and best way to protect your business.

MSPs are designed to identify and resolve any weak points in your IT infrastructure. MSPs are focused on being proactive and will also focus on IT support and advanced security. You'll get around-the-clock monitoring, data encryption and backup, network and firewall protection, security awareness training and so much more. With MSPs, you get a team of dedicated IT professionals who are available to assist with any tech dilemmas that may arise. It's the quickest and most cost-efficient way to fully protect your business.

TRAIN YOUR EMPLOYEES

If your employees have not been trained to be cybersecure, they need to be trained on this subject immediately. Security should also be built into the devices they use to access company data. This becomes even more important if your employees are working remotely. Multifactor identification and ensuring that your employees create complex and non-repetitive passwords go a long way toward keeping your business protected.

"Multifactor identification and ensuring that your employees create complex and non-repetitive passwords go a long way toward keeping your business protected."

Educate your employees about the most common forms of cyber-attacks. They should be aware of phishing e-mails and texts and should be taught to never open any links if they don't know who the sender is. Hackers have also started to frequent social media, and they often target small businesses through various platforms. Make sure your employees aren't clicking on any social media spam links that could put your network at risk. Lastly, make sure they aren't accidentally downloading any malware that could create disastrous outcomes for your company.

A cyber-attack can have cataclysmic effects on a small business, and every business owner needs to make sure their network is protected. If you don't know where to start, give us a call and we will find a way to help you make your company as cyberprotected as possible.

Fact: Many Businesses Don't Have A Disaster Recovery Plan

- The importance of disaster recovery
- The lack of disaster recovery plans among small businesses
- The leading causses of data loss
- The costs of downtime

No business is truly immune to disasters, but preparing against them will go a long way in making your company resilient. Our comprehensive guide will show you how to do just that. Download our FREE eBook today, and drop us a line if you have any questions.

The right way to set up guest Wi-Fi

Customers, partners, and vendors expect Wi-Fi access when they're visiting your office. This is why having guest Wi-Fi access is common for most companies. But setting it up the wrong way can create a frustrating experience for people looking to connect to the internet. In some cases, it can even leave your company exposed to cyberattacks. Here's how to do it right.

Never give guests access to your primary Wi-Fi

Giving your guests access to your company's main Wi-Fi connection might seem like a good idea, but you should avoid this at all costs.

Someone with technical know-how could potentially access your company network, including confidential data. In addition, if any of your visitors' mobile devices have been compromised, it's possible that they could transmit malware to your entire network.

Ways to create secondary Wi-Fi for guests

If your router comes with built-in guest Wi-Fi support (you can check this feature through a quick web search), you can use it to create a separate "virtual" network. This means guests will have access to the internet without directly connecting to your company's primary network.

Remember, your guest Wi-Fi should only provide outsiders with internet access, nothing more. While the proper setup isn't rocket science, it can be a tedious process. Having said that, if you need a team of experts to take care of it, or if you simply have questions about how else to leverage your hardware for better efficiency and security, just give us a call.

How To Create More Opportunities

To put it simply, in life, perspective is everything. Every activity, job and situation usually has multiple angles, depending on how you view it. By changing our perspective in our business and personal lives, we are creating a very positive mindset that will open us up to a plethora of new opportunities.

There's a rocky cliff that rises up at the back of my property, and atop that small cliff is a boulder. I normally wouldn't give a second thought to this giant rock that sits in my yard since it's nonliving. I mean, it's just a rock, right? But as I observed it more and more, my perspective completely changed.

You see, while the rock itself may be nonliving, it is actually thriving with life. There are beautifully coloured skinks that live in the crevices of the boulder, and I even saw a big black rat snake make its home there, too. When I took a second to think about it, I realized that this boulder sustains its own ecosystem.

By simply taking a moment to drop your own preconceived notions and making an effort to observe, you will find life and opportunities in something you may have previously missed. But changing your perspective is easier said than done. In order to change your perspective, you may have to do a little digging. You'll have to evaluate why you see things the way you do. You may need to reach out to others and consider their perspectives to get an idea of how others think. And lastly, you'll have to reform your own perspective so you can grow and find new opportunities.

Dig deeper within yourself and truly concentrate on what you're focusing on so you will see so much more. You'll quickly discover that the opportunities are endless.

Mike Michalowicz has always believed that he had the formula to success and has proved it on multiple occasions. He is the creator of Profit First, which is used by hundreds of thousands of companies across the globe to drive profit. He is the author of multiple books, including Get Different and The Toilet Paper Entrepreneur. Mike is a former small business columnist for The Wall Street Journal and served as a business makeover specialist for MSNBC. Mike currently leads two new multimillion-dollar ventures as he puts his latest research to the test. He also is a highly sought-after keynote speaker on innovative entrepreneurial topics.

Break Through The Digital Dilemma And Take Your Business To The Next Level

In the digital age, companies are growing faster than ever before, and the companies that are succeeding all have one thing in common: a growth mindset.

Companies that aren't looking to grow get stale quickly, and this becomes more apparent with each technological advancement. In order for your business to succeed, you will need to develop a growth mindset within your company. There are a few things you can do to adapt and create a mindset that will catapult you to the top of your industry.

The first thing is to continue promoting a learning and mentoring ideology within your business. There's always room for growth; you just need to encourage it. You should also encourage innovation by establishing areas where external

and internal sources can communicate. Also, stay informed and ahead of your industry by paying attention to new technology. Lastly, don't be afraid of feedback. It can help your company grow and help you to discover any shortcomings.

Facebook Recently Launched Its Metaverse, And it's A Privacy Nightmare!

Facebook is in the process of unveiling hardware and other technology to support its metaverse, even calling this new network "Meta." The social media platform has seen a recent decrease in users who cite mistrust as a key factor in their departure. A Facebook whistleblower, Frances Haugen, has stated that the virtual reality world could give Facebook another opportunity to steal even more personal information from its users.

Haugen said users will be required to set up many sensors throughout their home, which will encourage them to detract from reality and enter the virtual world. The idea of adding sensors into users' homes is a privacy nightmare. It gets even worse if you consider the fact that employers who use Meta may require their employees to have the sensors in their homes so they can participate in meetings. Trust in Facebook is already low, and Meta will have to ensure their system is safe if they hope for success.

It's Been Coined The 'Great Resignation,' But Why Are Employees Walking Out In Droves?

Everywhere you look, it seems like more businesses are putting out "Help Wanted" signs. Limeade, an organization that specializes in employee well-being, recently released the results of a study that focused on why people were leaving their jobs. Burnout was the top reason most employees quit. Through surveys and conversations with your team, you can discover if burnout is an issue in your business. Introducing mental health days and finding ways to equally distribute workloads can help prevent burnout.

People who recently left their jobs also stated that they wanted a more flexible or caring culture. Employees need time for themselves and will become unhappy if they feel work is taking away from that time.
