3 Things To Do To Protect Your **Business From Getting Hacked** 

### **Employees Are Letting Hackers** Into Your Network ... What You Can Do To Stop It

Cyberthreats are everywhere these days. Even if you have other forms of network arsenal of tools at their disposal, from auto- the single biggest threat to your network! mated bots to malicious advertising networks, to make it possible.

But there is one "tool" that you may be plishes several things, including: putting directly into their hands: your employees. Specifically, your employees' 1. Identifying Phishing E-Mails Phishing lack of IT security training

from the outside using malware or bruteforce attacks (hacking, in a more traditional sense), the truth is that most hackers love it when they can get others to do their work These days, phishing e-mails are a lot more for them.

employees into clicking on a link in an sender you actually know. email or downloading unapproved software onto a company device, all the They can disguise these e-mails as messages employees wreak havoc. The worst part is your business. that your employees may not even realize that their actions are compromising your network. And that's a problem.

Hackers, scammers and cybercriminals are security in place malware protection, working overtime to break into your firewalls, secure cloud backup, etc.it won't network and the network of just about be enough if your employees lack good IT every business out there. They have a huge security training. In fact, a lack of training is

> It's time to do something about it. Comprehensive network security training accom-

clever. Hackers can spoof legitimate e-mail addresses and websites and make their In other words, if they can fool your e-mails look like they're coming from a

hackers have to do is sit back while your from your bank or other employees within

You can still identify these fake e-mails by paying attention to little If you have remote employees, they should only use verified and details that give them away, such as inconsistencies in URLs in the protected devices to connect to your network. (They should also be body of the e-mail. Inconsistencies can include odd strings of num- using a VPN, or virtual private network, for even more security.) bers in the web address or links to YourBank.net instead of Your But more importantly, your employees should be trained on this Bank.com. Good training can help your employees recognize these security. They should understand why it's in place and why they types of red flags.

2. Avoiding Malware Or Ransomware Attacks One reason why loads a program they shouldn't. They might think they're about to download a useful new program to their company computer, but bad passwords that never get changed. Don't let this be you! the reality is very different.

phishing e-mails, but it also comes from malicious ads on the Inter- best practices in updating the passwords and in choosing secure net or by connecting an infected device to your network. For example, an employee might be using their USB thumb drive from home business and the outside world. to transfer files (don't let this happen!), and that thumb drive happens to be carrying a virus. The next thing you know, it's on your network and spreading.

This is why endpoint protection across the board is so important. Every device on your network should be firewalled and have updated malware and ransomware protection in place.

"Every device on your network should be firewalled and have updated malware and ransomware protection in place."

should only connect to your network using secured devices.

If you want to make a hacker's job easier than ever, all you have to malware attacks work is because an employee clicks a link or down- do is never change your password. Or use a weak password, like "QWERTY" or "PASSWORD." Even in enterprise, people still use

A good IT security training program stresses the importance of Malware comes from many different sources. It can come from updating passwords regularly. Even better, it shows employees the passwords that will offer an extra layer of protection between your

> If you or your employees haven't updated their passwords recently, a good rule of thumb is to consider all current passwords compromised. When hackers attack your network, two of the big things they look for are usernames and passwords. It doesn't matter what they're for hackers just want this information. Why? Because most people do not change their passwords regularly, and because many people are in the habit of reusing passwords for multiple applications, hackers will try to use these passwords in other places, including bank accounts.

> Don't let your employees become your biggest liability. These are just a few examples of how comprehensive IT and network security training can give your employees the knowledge and resources they need to help protect themselves and your business. Just remember, you do not have to do this by yourself! Good IT training programs are hard to find, and we are here to help.

## Your Computer Network Is Being Haunted!

Your small business is under attack. Right now, extremely dangerous and well-funded cybercrime rings are using sophisticated techniques to hack into thousands of small businesses to steal credit cards, blackmail you to recover data and swindle money directly out of your bank account.

Want Help In Implementing Critical Security Measures For Your Business? During The Month Of October, Sign Up For

A FREE Cybersecurity Audit (A \$497 Value).

(This offer is only valid during the month of October 2020)

# Shiny New Gadget Of The Month:

Ovo Portable Steam Iron
And Garment Steamer

## The Ovo Portable Steam Iron And Garment Steamer is

much smaller than your average iron and yet capable of so much more. It's an iron and a steamer and the perfect companion for when you're traveling and want to look sharp. Or keep the Ovo at home to save space!

The Ovo fits easily in your hand. It's lightweight and won't take up much space in your luggage. Plus, it holds enough water to create up to 10 minutes of steam. You can quickly switch from the metal ironing plate to the brush attachment to add finishing touches to delicate fabrics (and remove any lint or pet hair). It even comes with a heatresistant travel case. Learn more about this mini-marvel at bit.ly/2CgQzJG!

## The Leader's Most Important Job

Can you guess what the most important trait is for effective leaders? You can probably guess all sorts of things: relationship building, communication, awareness, positivity, innovation The list goes on. And you probably do a lot of those things too.

When I speak with leaders, I emphasize that a person's success as a leader doesn't come from what they do or how they do it — it's about how often they do these important things.

## The Most Important Thing For Leaders: Focus Your Team

A leader's most important job is taking the time and effort to focus their team. Leaders must help their team members focus their time and expertise to complete the organization's most important work.

The most successful businesses are driven by profit, innovation, efficiency and effectiveness.

Your team's revenue and results are all driven by how people spend their time (effort) and expertise (knowledge and skills), and these are the keys to elevating your team's success. By doing these things and being a role model for your team, you can experience amazing results.

### How To Elevate Your Team

- 1. Passion Creating a vision requires passion. This passion elevates your own commitment and helps both you and your team be productive. It's unlikely that a leader will be fully immersed in their role, their organization or their team if they are not passionate about what they are doing.
- 2. Time, Expertise And Motivation Everything is the by-product of time and expertise. When a leader invests both time and expertise into their team, the team grows. When time and expertise are invested wisely, the organization also achieves great success. By putting the time and expertise into your team members, you can motivate them to improve in their roles.

3. Focus This goes hand in hand with time and expertise. By focusing on the strengths (and weaknesses) of a team and learning how to constantly improve and grow, an organization can produce positive results. When a leader doesn't have this focus, the organization suffers. Mediocrity becomes the norm.

A great deal of time and expertise is wasted in companies where employees are doing low-priority work or work that shouldn't be done at all. When a team lacks an effective leader, it is difficult for them to know what they should be doing instead.

When a leader takes the time to show their team the importance of their work and how their work will achieve success, the whole organization grows. This commitment is what creates remarkable performances. You can learn more about this in my book The Encore Effect: How To Achieve Remarkable Performance In Anything You Do.

At the end of the day, it's most important for leaders to regularly take the time to focus on and elevate their team. Just as a conductor makes sure members of an orchestra are all playing the right music to the best of their ability, so does an effective leader do their job.

Mark Sanborn, CSP, CPAE, is the President of Sanborn & Associates, Inc., an "idea studio" that seeks to motivate and develop leaders in and outside of business. He's the best-selling author of books like Fred Factor and The Potential Principle and a noted expert on leadership, team building, customer service and company change. He holds the Certified Speaking Professional designation from the National Speakers Association and is a member of the Speaker Hall of Fame. Check out any of his excellent books, his video series "Team Building: How To Motivate And Manage People" or his website, marksanborn.com, to learn more.
