

Connect the way you want to.

PCPC can integrate the services and devices you need.

Voice + Video Conferencing

From modern telephone handsets using VOIP technology, to “soft phones” that travel on your laptop, tablet, and cell PCPC works with its partners to provide the most cost effective solution. Move calls from device to device – including mobile, desktop and handset – with high-quality video, and audio.

Cloud Services + Software

PCPC can help get your team on the same page when it comes to software licensing, updates and installation. We guide you through the purchasing process, and ensure that the licensing tier and selected software can both integrate with existing systems, as well as scale with your future business growth.

Messaging + Sharing, etc

Share screens, notes, files, and annotations, before, during and after a conference call. Record calls for replay. Chat by text in real time during calls. Get caller ID, call forwarding, voicemail, sign-on links to increase attendance and continuity. Take advantage of in-depth reports.

Interactive Presentations

Outfit your office space with a fully interactive EPSON touch screen whiteboard + projector solution, for smart conferencing. Control the board remotely from a device or from the board itself. Save and share screens as you go along, and even record your presentation.

Call for a consultation today!
We offer solutions that scale with your growth.
