

## **Technology Response Team** Achieves HIPAA Compliance with Compliancy Group

### **SUMMARY:**

**Technology Response Team** has demonstrated compliance with federal HIPAA regulation by completing Compliancy Group's proprietary 6-Stage HIPAA Risk Analysis and remediation process.

### **Press Release:**

**Technology Response Team** is pleased to announce that it has achieved compliance with the federally mandated standards of the Health Insurance Portability and Accountability Act (HIPAA) through the use of Compliancy Group's proprietary HIPAA methodology, The Guard<sup>®</sup> compliance tracking software, and HIPAA Seal of Compliance<sup>®</sup>.

HIPAA is made up of a set of regulatory standards governing the security, privacy, and integrity of sensitive health care data called protected health information (PHI). PHI is any demographic health care-related information that can be used to identify a patient. If vendors who service health care clients come into contact with PHI in any way, those vendors must be HIPAA compliant.

## Why HIPAA matters a lot to TRT

As a managed service provider (MSP), and cyber security company who serves clients in the healthcare industry, Technology Response Team is a "[Business Associate](#)" (BA) under the definition of HIPAA (45 CFR §160.103). This designation subjects Technology Response Team to stringent HIPAA regulations related to the security and privacy rules it must adhere to in order to protect the "electronic protected health information" (ePHI) it encounters while providing IT service and support for its "Covered Entities" (CE) healthcare clients

Technology Response Team has completed Compliancy Group's Six Stage Implementation Program, adhering to the necessary regulatory standards outlined in the HIPAA Privacy Rule, HIPAA Security Rule, HIPAA Breach Notification Rule, HIPAA Omnibus Rule, and HITECH. These standards have been heavily vetted against the letter of the law and meet federal NIST requirements. Technology Response Team's good faith

effort toward HIPAA compliance through the use of The Guard has been verified by the HIPAA subject matter experts and Compliance Coaches® at Compliancy Group.

The HIPAA Seal of Compliance is issued to organizations that have implemented an effective HIPAA compliance program through the use of The Guard, Compliancy Group's proprietary compliance tracking solution.

HIPAA compliance has allowed Technology Response Team to better regulate how we conduct business and protect our customers, even our non-medical customers. We have incorporated the HIPAA policies and procedures and it has made us better able to protect our customers and ourselves. It has also allowed us to help the many companies in the Denver Front Range health care industry to better understand HIPAA and become compliant.

Clients and patients are becoming more aware of the requirements of HIPAA compliance and how the regulation protects their personal information. Forward-thinking providers like Technology Response Team choose the HIPAA Seal of Compliance to differentiate their services.

**About Compliancy Group:**

***About Technology Response Team***

Technology Response Team's business model is based on the relationships we establish with our clients and their businesses. Our primary goal is to be a strategic partner helping our clients succeed through technology. We strive to keep our clients up to date in the quickly changing world of modern technology. We help our clients understand their company's pit falls, the need for strict security and disaster recovery plans for their infrastructure. We also specialize in cybersecurity and compliance. We want to help our clients better understand technology, and how to securely use it, by translating the "geek speak" into something they understand and can use to help make their technology work for their business, and help keep their businesses safe from malicious attacks. You can trust Technology Response Team to keep your business infrastructure working for you!
