

# PRIVACY ULTIMATE UNDERLAY™

Floor soundproofing is a simple process when the correct underlayment is selected for your specific requirements. Privacy Ultimate Underlay™ is a unique floor underlayment that will block both footsteps and airborne noise, all in a single step. Privacy Ultimate Underlay™ is available in five thicknesses to provide options for weight, which is the key consideration for blocking loud noises through the floor. Every project is different and it's important that you have the right company working with you to insure a successful outcome. We are that company.

Privacy Ultimate Underlay™ is manufactured in the US, using 92 percent post-consumer recycled rubber. We have preformed hundreds of acoustical test with Privacy Ultimate Underlay™, received Floor Score certification for indoor air quality, and have gained approval for LEED. The right choice for soundproofing your floor is just a phone call away.
