

# GYMNASIUM SOUNDPROOFING

We often hear from customers that are experiencing terrible echo in Gyms. In most cases the gym is used for more than just sporting events. Live performances, school meetings, assemblies, and gym class are just some of the various events that happen in a gym . If the gym is not treated with sound absorbing products, the echo in the gym can make activities miserable for all in attendance. The good news is we can quickly help you get rid of the echo in your gym!

Products that work to improve the acoustics in a gym are Acoustical Baffles, Sound Absorbing Foam Panels, and Fabric Wrapped Acoustical Panels, and Lapendary Banners. We can add color to your room and correct the noise problem at the same time. Installation is simple for any option.

We start with room dimensions and pictures from you. Then we plug that information into our modeling software to determine the current Reverberation Time (RT). We know what the RT should be, and our software tells us what to add to the room. You will have a couple of product options along with many colors to choose from. The process is very simple, we will guide you through every step!
