

Is Your System Secure?

Can Your Business Quickly Recover from a Disaster?

The answers to these questions could be the difference between your small or medium-sized business **surviving and thriving** – or shutting its doors forever. Your disaster recovery plan is one of the most **crucial** parts of your operation.

Over **950,000 records** containing sensitive information were **compromised** in the first three months of 2017.

It takes, on average, more than **200 days** to detect a **security breach**.

The damage to cybercrime will cost **\$6 billion** per year by 2021.

A simple hard drive recovery can cost more than **\$7,500** and may not even be possible.

81%

of organizations say that **negligent or careless employees** are the main risk to the security of endpoints.

44%

of businesses estimate they could lose **\$10,000** or more during an hour of downtime. How much would an hour of downtime cost your business?

58%

of SMBs say they test their disaster recovery plan just **once a year** or less.

60%

of SMBs go out of business within six months after a disaster; **90%** within two years after.
