Business Process Review and Optimisation

Would you like to increase your Gross Margin? Scale with more ease without adding new staff or wage costs? Reduce training time for staff and managers?

By completing an operational review (whole business, department, or individual role), you could discover opportunities for optimisation.

If this is what you need, then ask for Daniel on **09 281 4034** or email **sales@vertech.co.nz** to find out how our professional coaches could work with your team to enhance your IT investment and make greater gains!

June 2021

Our Mission:

We support and protect the dynamic owners of growing businesses allowing them to scale by providing Stable, Secure and Scalable IT Services & Solutions.

We aim to be the first choice as a Trusted IT Partner for these businesses on the North Shore & Auckland

Don't Let Your Employees Become Your Biggest Vulnerability

A couple years ago, *TechRepublic* ran a story with the following headline: "Employees Are Almost As Dangerous To Business As Hackers And Cybercriminals." From the perspective of the business, you might think that's simply inaccurate. Your company strives to hire the best people it can find – people who are good at their jobs and would never dream of putting their own employer at risk.

And yet, many employees do, and it's almost always unintentional. Your employees aren't thinking of ways to compromise your network or trying to put malware or ransomware on company computers, but it happens. One Kaspersky study found that 52% of businesses recognize that their employees are "their biggest weakness in IT security."

Where does this weakness come from? It stems from several different things and varies from business to business,

but a big chunk of it comes down to employee behavior.

Human Error

We all make mistakes. Unfortunately, some mistakes can have serious consequences. Here's an example: an employee receives an e-mail from their boss. The boss wants the employee to buy several gift cards and then send the gift card codes to them as soon as possible. The message may say, "I trust you with this," and work to build urgency within the employee.

The problem is that it's fake. A scammer is using an e-mail address similar to what the manager, supervisor or other company leader might use. It's a phishing scam, and it works. While it doesn't necessarily compromise your IT security internally, it showcases gaps in employee knowledge.

Continued from pg.1

Another common example, also through e-mail, is for cybercriminals to send files or links that install malware on company computers. The criminals once again disguise the e-mail as a legitimate message from someone within the company, a vendor, a bank or another company the employee may be familiar with.

It's that familiarity that can trip up employees. All criminals have to do is add a sense of urgency, and the employee may click the link without giving more thought.

Carelessness

This happens when an employee clicks a link without thinking. It could be because the employee doesn't have training to identify fraudulent e-mails or the company might not have a comprehensive IT security policy in place.

Another form of carelessness is unsafe browsing habits. When employees browse the web, whether it's for research or anything related to their job or for personal use, they should always do so in the safest way possible. Tell

employees to avoid navigating to "bad" websites and to not click any link they can't verify (such as ads).

Bad websites are fairly subjective, but one thing any web user should look for is "https" at the beginning of any web address. The "s" tells you the site is secure. If that "s" is not there, the website lacks proper security. If you input sensitive data into that website, such as your name, e-mail address, contact information or financial information, you cannot verify the security of that information and it may end up in the hands of cybercriminals.

Another example of carelessness is poor password management. It's common for people to use simple passwords and to use the same passwords across multiple websites. If your employees are doing this, it can put your business at a huge risk. If hackers get ahold of any of those passwords, who knows what they might be able to access. A strict password policy is a must for every business.

Turn Weakness Into Strength

The best way to overcome the human weakness in your IT security is education. An IT security policy is a good start, but it must be enforced and understood. Employees need to know what behaviors are unacceptable, but they also need to be aware of the threats that exist. They need resources they can count on as threats arise so they may be dealt with properly. Working with an MSP or IT services firm may be the answer – they can help you lay the foundation to turn this weakness into a strength.

"One Kaspersky study found that 52% of businesses recognize that their employees are 'their biggest weakness in IT security.'"

Free Cyber Security Assessment Will Reveal Where Your Computer Network Is Exposed And How To Protect Your Company Now

At no cost or obligation, our highly skilled team of IT pros will come to your office and conduct a comprehensive cyber security audit to uncover loopholes in your company's IT security.

After the audit is done, we'll prepare a customized "Report Of Findings" that will reveal specific vulnerabilities and provide a Prioritized Action Plan for getting these security problems addressed fast. This report and action plan should be a real eye-opener for you, since almost all of the businesses we've done this for discover they are completely exposed to various threats in a number of areas.

To get started and claim your FREE ASSESSMENT (valued @ \$597) now, call our office at 09 972 0367

Client Spotlight

We have been working closely with Dental Practices in the Auckland and Waikato areas to provide comprehensive solutions.

We have dedicated systems and processes in place that will build, support and protect their systems, protect their data and enhance their team collaboration.

These solutions have allowed them to focus on their patients as we manage their IT needs in the ever evolving complex world that is Cybersecurity. With recent cyber attack on Waikato DHB, many loopholes are exposed in healthcare industry cyber security.

We closely work with domain experts and leaders in dental software such as Henry Schein One and Software of excellence to build the solutions.

From Start-Ups To Best Places To Work: How Culture Changes Everything

There are two parts to culture: people and systems. On the people side, consider the "Empathy Accountability Continuum." Empathy is at one end of the spectrum and accountability at the other.

Then, based on who you are dealing with and the context of the conversation, figure out where you need to be on that continuum. The more you get to know someone, the easier it becomes to choose the right moment in time to lean toward either empathy or accountability.

How do you know where to land on the scale? Be curious about the people on your team as well as people in the world around you. Ask what they are doing and how they are doing it.

A big part of maintaining curiosity and understanding also comes from being calm and connected. You can't have a connection with your people unless you are calm. It's part of being a leader within your organization.

To that effect, you need to be able to lead yourself and know where you are on the Empathy Accountability Continuum. We can't lead others unless we can lead ourselves. So, we have to understand our own fears and concerns. Then it becomes easier to make those connections.

On the systems side of things, you have to "discover the core": your core purpose and core values, which tell you what is important to you and your business.

As part of that, you also need to document the future. Plan, strategize and put it into writing. Where are you going? What is your vision?

What is your BHAG (big, hairy, audacious goal)? What is your 10-year obsession?

Once you plan and put your future into writing, you have to execute relentlessly. This is how you make sure you get there. Live your system – use daily rituals like huddles and make sure they are useful. You should be constantly talking about your core values and goals.

Of course, as part of building a strong culture, you need a robust recruiting process. Find the right people and keep them engaged. Have a multistep and multiperson process when hiring and use a scorecard (a very detailed job description) when recruiting.

When you bring it all together – people and systems – be sure to show more love. Make sure there is peer recognition and recognition from leadership on a regular basis. Send them cards on their anniversary or birthday. Even have a budget for when bad stuff happens in people's lives.

But don't rush your culture. Take it one piece at a time – do something every day to work at it and build something great.

Tristan White is the founder and CEO of The Physio Co, a unique health care company based in Australia. While he's led The Physio Co, the company has been ranked one of Australia's 50 Best Places To Work for 11 consecutive years. In building this fast-growing company, White authored the book Culture Is Everything and started a podcast, Think Big Act Small. Make The Most Of Your Remote Workforce

More people are working at home. With a spread-out workforce, businesses face new challenges that they didn't face with the traditional in-office model. Now, as businesses adapt, they are looking for ways to get more out of their remote workforce.

1. They're Reorganizing.

Businesses are taking a hard look at their internal structure, along with systems and processes. They're shifting the way they hire by raising their expectations. Along with that, they're redoing the way they onboard and train. They're relearning to do everything remotely, and tools like Slack and Zoom are taking center stage.

2. They're Investing In Technology.

Businesses are bringing new tools and tech into the mix. They're investing in

■ Use Technology To Make Your Business Stand Out

Think about how you engage with social media. Is it something that's just there or is it something you're using to actively reach out and connect with customers, potential customers and your community? TikTok, for example, relies on a powerful algorithm to reach specific audiences. Businesses can take advantage of that to get content, including ads, to relevant eyes. According to Hootsuite, TikTok pushes for five million daily impressions for certain ads.

Taking it a step further, you can mix AI with human communication. Chatbots are more advanced than ever and can seriously impact lead generation. Chatbots also direct users to real people to continue the conversation on specific terms. Basically, there are more ways to customize how you communicate, and it's worth investing in. *Forbes, March 12, 2021*

Some Bosses worry "Isn't it a WASTE If I spend all this money training my employees and then they LEAVE?"
To this I say "What if you don't INVEST in getting the best from your people and THEY STAY!?"

Daniel Watson - Managing Director Vertech IT Services

Microsoft 365 Coaching

Does this sound like you?

- You've upgraded to 365 and there all these shiny new toys, which seem really fabulous but don't know how to use them all?
- You want to get better at using Excel or Word so you can have a productivity Blitz and just get better at your job?
- You've got a mountain of data and want to Use PowerBI to produce live reports to impress the board?
- The company has switched over to using teams but not everyone is getting the best out of it and you need a bit of coaching to get people using it, full stop!
- Sharepoint seems good but you have a sneaky suspicion that you could be doing some awesome workflow automation to save time and make your processes slick?

If these are your challenges then you need to call Daniel on 09 281 4034 or email sales@vertech.co.nz to find out how our professional coaches could train your team to enhance your IT investment and make greater gains!
