

What's New

Windows 11 upgrades.. DON'T! Not yet anyway..

You recently received an email from us notifying you of the concerns around Windows 11. Microsoft has started rolling out the upgrade which is free to eligible windows 10 devices. Our Team is still in the process of testing out & exploring the beautiful new features. We are still asking that our clients hold off upgrading until we have confirmed the compatibility with our security stack of protections.

Our Team will get in touch with you to give you the go ahead and to assist you with this process.

Any questions, give us a call on

October 2021

Our Mission:

We support and protect the dynamic owners of growing businesses allowing them to scale by providing Stable, Secure and Scalable IT Services & Solutions.

We aim to be the first choice as a Trusted IT Partner for these businesses on the North Shore & Auckland

Want To Make Sure Your Business Is Protected From A Data Disaster?

Did you know that 93% of all businesses – that don't have a disaster recovery plan in place when they experience a data disaster – go out of business within a year of that disaster? And yet, 68% of businesses don't have a disaster recovery plan in place.

Losing access to your business's data in this day and age could very well mean losing everything. That means that as data becomes an increasingly important commodity to businesses of all types and sizes, so does having a plan for if or when your business experiences a data disaster.

The thought of protecting your business against a data disaster might be daunting, but don't worry. By following the steps listed below in this article, you can make sure that your business is ready to take on the challenge.

However, before we actually get into those steps, there is one distinction you should understand: the difference between a business continuity plan and a disaster recovery plan. A business continuity plan is primarily proactive, in that it is a strategy by which a business can continue to operate no matter what kind of disaster or setback befalls it. A disaster recovery plan is primarily reactive and has to do with how a business acts immediately following a disaster of some sort – in this case, a data disaster.

So, now that we're clear on what a disaster recovery plan is, here are the steps your business can take to create one that works for you and your employees.

Step 1: Rally The Troops And Assess Your Equipment

In the fight against data disasters,

Continued on pg.2

everyone has to be on board. Otherwise, there will always be holes in your defense plan. That's why executive buy-in – getting everyone in the company, from the CEO to the entry-level employees – is crucial. You need everyone to collaborate cross-functionally in order to fully protect your business.

From there, you need to thoroughly analyze each of your business's systems, applications and data sets, as well as how they're physically accessed, in order to suss out any potential vulnerabilities. Then you should determine which systems are absolutely critical to the operation of your business and for getting products and services to your customers. These are the functions that will need to stay up and running, even after a data disaster.

Once you have everyone on board and an understanding of your equipment and assets (as well as their vulnerabilities), it's time to actually formulate your disaster recovery plan. To do this, you should take a look at your budget, resources, tools and partners in this endeavor. When you understand how long it takes your business to get back online and the cost for doing so, you'll have a good idea of how to move forward.

“68% of businesses don’t have a disaster recovery plan in place.”

No great plan is complete without first testing it to see if it will work. Put your disaster recovery plan through a trial run to see how quickly your team responds to solve the problem and see if there are any improvements that need to be made to the process. Then, by the time an actual data disaster occurs, your business will know how to shut it down and keep running with no problem at all.

While the steps themselves aren't difficult to understand, preparing your business to combat data disasters takes a lot of work. In the end, though, the work is worth it if it means protecting your data. As a recap, here are the four main action steps that you need to take in formulating a disaster recovery plan:

1. Get executive buy-in for creating a disaster recovery plan.
2. Analyze and evaluate your business's systems, applications and data to understand how they could be impacted.
3. Find out which systems you need to keep running and prioritize them during the fallout of the data disaster.
4. Test your plan before you actually need to put it in action.

Follow these steps, and your business's data will be safe from any threat that comes your way.

Free Cyber Security Assessment Will Reveal Where Your Computer Network Is Exposed And How To Protect Your Company Now

At no cost or obligation, our highly skilled team of IT pros will come to your office and conduct a comprehensive cyber security audit to uncover loopholes in your company's IT security.

After the audit is done, we'll prepare a customized "Report Of Findings" that will reveal specific vulnerabilities and provide a Prioritized Action Plan for getting these security problems addressed fast. This report and action plan should be a real eye-opener for you, since almost all of the businesses we've done this for discover they are completely exposed to various threats in a number of areas.

To get started and claim your **FREE ASSESSMENT (valued @ \$597) now, call our office at 09 972 0367**

Internal Fraud Interview

If you have suffered from an event like Internal Fraud then Vertech needs you!

If not you, do you know of someone that has gone through this.?

Daniel will be conducting some interviews around this topic and will be structuring the information around

- What was going at the time
- The impact it caused
- How it can be prevented in future
- How can you secure a prosecution

There are many Business owners out there who have suffered at the hands of trusted individuals and we are trying to create awareness around this and also shine some light for those who are looking for a starting point if it were to happen to them

Get in touch with us at daniel@vertech.co.nz or call him on **021 2798019**

Don't Give Up On You No Matter What Anyone Says

At the office, in our shipping area for our books, there's a little shelf on the wall, displaying a copy of each of the six books I've written. However, technically, there is one book missing from the display: my book *Profit First*.

Now, there is a copy of *Profit First* on the shelf. However, it's not the first copy that I published – it's self-published, actually. *Profit First* was the third book that I wrote, the first two being *The Toilet Paper Entrepreneur* and *The Pumpkin Plan*, both through Penguin Random House Publishing. When I pitched *Profit First* to them, however, their exact words to me were as follows: "No one needs another accounting book."

And they declined to publish it – at least at first. Not too long after facing that rejection, I spoke with someone who was mentoring me at the time about my frustrations at not getting *Profit First* into the hands of business owners everywhere just because my publisher didn't have faith in it. After I finished explaining all of that, my mentor left me with the words that I would actually follow: "Make them regret it."

I had to make them see that in refusing to publish *Profit First*, they were making a huge mistake. I had faith in my book. I knew it could help so many business owners out there. All I had to do was prove it.

So, that's why I initially had to self-publish *Profit First*. And guess what? It sold so many copies that Penguin Random House eventually came back to me and said that they wanted to buy the book and republish it in a revised and expanded edition. *Profit First* is by far my most popular book, and it's helped more than 600,000 business owners apply the profit first

method and mentality to their business.

It's my hope that sharing this story leads to a wake-up call for you. Don't let the few naysayers who are scrunching their noses at your big ideas dictate the direction you take in your business and in your life. If they don't share your vision (at least at first), that doesn't mean you have the wrong vision – it just means you have to double down and press forward. You have to believe in your idea even more than you already did.

If I hadn't stuck to my guns and published *Profit First*, regardless of what my publisher said, there would be thousands of business owners out there who would not be nearly as successful as they are now. They've grown, curated their clients and automated their business in ways that wouldn't have been possible otherwise.

What's your next big idea? Does the thought of how it could help people fire you up? Are there people in your life, even people who care about you, who tell you that your idea won't work? Don't give in. Don't give up on your dreams. Keep pushing forward, and I promise you that eventually, you'll see the success that you already know is possible.

Mike Michalowicz is a very successful author, entrepreneur and lecturer. He has written several successful books, including his latest, Get Different. He is currently the host of the Business Rescue segment on MSNBC's Your Business, and he previously worked as a small-business columnist for The Wall Street Journal.

■ A Massive Threat To Windows 10 Users?

Security researchers discovered a vulnerability in Windows Hello's facial recognition programming that could potentially impact Windows 10 users, but does it warrant much fear? Experts say no – at least, not to the average user.

The vulnerability has to do with Windows Hello's camera system. It uses a camera with an infrared sensor and an RGB sensor. However, only the infrared image is processed during facial recognition.

This theoretically means that if someone were to get a hold of an infrared image of your face, they could use it to access your computer – and that's where the threat starts to fall apart.

Whenever a hacker needs physical access to the computer and the computer's user, they won't waste their time unless you're hiding some pretty juicy data.

So, don't worry, Windows 10 users – you can sleep easy knowing that no one is trying to steal your face.

■ Keeping Up Workplace Relationships Even When You're Working From Home

When you're working from home, the valuable bonds that you naturally form with your coworkers in the office will be hard to form and maintain – but not impossible. Here are a few ways that you can build relationships with your coworkers from home.

Communicate (And Listen) Often And Well. That means going beyond just the daily Slack check-ins on progress. Let your coworkers know about areas in which they could improve, and don't forget to really and truly hear (or read) what they have to say. Active listening is just as important as effectively communicating yourself.

Create Channels For Building Strong Teams. Strong teams mean increased productivity and satisfaction from employees. To build

strong teams, build channels for those teams to use to communicate throughout the day.

Find Opportunities For Coworkers To Socialize Online. To get coworkers relating to one another, make online coffee hours (or happy hours!), contests, competitions, and classes. Coworkers who have fun together work well together!

■ What Does 2021's Record IPO Market Mean For Your Business?

If you're a private business owner looking to take your business public, now is the time.

So far, 2021 has seen a higher full year average of IPOs than those of the previous 10 years, rivaling that of the dot-com boom. To take advantage of the upswing, just use the first three of the four stages of scaling to guide your way to incredible revenue gains.

1. Get "early adopter" customers to help you develop a product that differentiates your business from the competition. This will lead them to bring you more customers.
2. Build a scalable business model where you can change how you sell, market, design, build, ship and service your products. Your costs will decline as you grow, and this will help you generate more revenue as your business gets bigger.
3. Finally, make sure your business gets more and more liquid, expanding into new regions and new customer demographics. Now you're ready to raise some venture capital!
