

ECM Readiness Assessment

YOU...

- Have important documents stored in various places with differing degrees of access and security
- Depend on Excel for data capture, and email for workflow
- Are frustrated with the difficulty of billing backup, project closeout, HR compliance, and invoice approval
- Struggle to obtain vital information electronically to and from the field
- Rehandle data multiple times and/or spend valuable time cleaning up data for further processing
- Have far more systems at present that are not integrated, and spawn even more quantities of records

THE ASSESSMENT...

- Two days of onsite interviews and workshops
- Two senior consultants
- Departmental interviews
- An Executive Summary that documents your situation, compares it against peers, and evaluates options

THE RESULT...

- ECM/Document Management Plan - Obtaining better knowledge of a technology platform that should be part of your IT Infrastructure

WE...

- Understand the systems you currently have in place as well as the general direction of technology and solutions for construction
- Appreciate the importance and value of solving these issues for companies in the construction industry
- Have considerable experience with various ECM and Document Management solutions but do not represent any products or vendors

Offer an ECM Readiness Assessment at a relatively low cost, which is our commitment to helping solve this problem
