

SaaS Backup

Backup Services for Office 365 and GSuite

IT teams around the globe are facing many challenges as they manage an abrupt shift to remote work. This has caused a surge in the use of cloud collaboration apps and subsequent issues with access. Microsoft Office 365 Teams gained more than 12 million daily users in a single week - up 37.5 percent - and then suffered an outage due to the rapid rise in demand.

In adjusting to a completely remote, digital workforce, IT teams need tools that can augment their capacity to handle new compliance, security, and data loss risks. Office 365 and G Suite may make collaboration more efficient, but data protection and management harder. IT teams need a failsafe for this growing dataset in the cloud. Backupify can help.

Office 365 and G Suite Data is not Automatically Protected

SaaS data is not immune to permanent data loss. Both Microsoft and Google make no guarantees when it comes to restoring inadvertently or maliciously deleted data, whether it's human error or a ransomware attack. In addition, the move to work-from-home triggered a new wave of cyber-attacks.

Reduce Risk and Save Time with SaaS Backup

An independent backup separated from the SaaS app itself is necessary to avoid the most common data loss pitfalls. In addition: setup takes 5 minutes and can be done completely remote.

SaaS backup should be the easiest shift to make as IT teams transition to a new remote workforce. Protect employee data and save time, so you can manage other pressing areas of your business.

Simple, Automated, Secure Backup

- Automated backups to Datto's secure, private cloud
- 3 minute daily backups
- 5 minute remote setup
- Point in time restore and export
- Unlimited Storage
- Customizable retention with infinite option
- 24/7 support

Comprehensive Support

Office 365

- Exchange
- OneDrive
- SharePoint
- Teams

G Suite

- Gmail
- Calendar
- Contacts
- Shared Drives
