The Best Tips For Training **New Hires**

When you consider the investments in What if there were a way that you could best ROI?" With that in mind, would you think of making a significant investment in bolstering your IT department?

Many CEOs are understandably hesitant to throw a lot of money into their IT department because the ROI is more difficult to estimate. That said, though, consistently updating your company's IT services is becoming increasingly crucial to the continued success, and indeed safety, of your company. Ransomware and other cyber-attacks that steal company data are becoming more frequent and more costly, while IT departments continually get the short end of the budgetary stick.

While that all undoubtedly sounds horrible, you might be wondering just what you can do about it. After all, you only have so much money you can invest back into your company's IT department, and it might not be sufficient for keeping your IT staff from getting burned out, disgruntled or making costly mistakes even when they're performing their responsibilities to the best of their abilities.

your business that you can make as a CEO, have access to the most up-to-date IT you probably think to yourself, "Which knowledge and software while also not investments will give my company the having to shell out the funds necessary to update your systems and hire more knowledgeable employees? Well, that's where co-managed IT can be your company's life preserver.

> Co-managed IT is a flexible system for keeping data for your company, employees and clients safe from cyberattacks as well as assisting in your daily operations where needed. Think of it as "filling in the gaps" that your current IT department (try as they might) struggle to

> For instance, say your current IT department is great at taking care of the day-to-day fires that inevitably come up in a normal workday, but they struggle to get to the "important but not urgent" task of updating your company's cyber security and creating data backups. Maybe it's the other way around, where your IT department is very focused on security, but they struggle to find time to assist employees with password resets and buggy programs. Maybe neither of these cases describes your IT department,

but they still need better access to the tools and software that would allow them to reach their full potential in protecting the company's sensitive information. Or maybe your company is going through a period of rapid expansion, and you just don't have time to build the kind of IT infrastructure that would best serve your needs.

Regardless of what your IT department's current needs are, comanaged IT is the solution. We're here to do the tasks and provide the tools that your current IT department just can't provide. Make no mistake, however: our intent is not to replace your current IT leader or team. In fact, we rely on the expertise that your IT department has about your systems. That's what makes up the "co" in "co-managed IT."

In order for co-managed IT to work, your company's IT department will need to see us as an ally in doing their job, not as an adversary. At the same time, they'll also need to be open to new ways of doing things. The world of cyber security

"Co-managed IT is a flexible system for keeping data for your company, employees and clients safe from cyber-attacks, as well as assisting in your daily operations where needed."

is constantly changing, and if your IT department is set in their ways and unwilling to budge, your company will be left with an antiquated system, chock-full of valuable data that hackers and cybercriminals can easily exploit.

Finally, however, in order for co-managed IT to work, your company still must be willing to invest in its IT department. We know that the ROI might not be as clear as it is for some other investments, but trust us, the consequences of not having upto-date IT services if (or when) hackers steal your sensitive data could financially devastate your company - or even end it altogether.

So, with that in mind, we hope you'll consider the benefits of co-managed IT and how it can make your company safe from cyber-attacks and bring you peace of mind.

What You Need To Know About The New Security Breach **Notification Laws**

Since companies are storing more and more data on their employees and clients, most states are starting to aggressively enforce data breach and security laws that set out the responsibilities for businesses capturing and storing personal data. What do most states consider confidential or sensitive data?

Definitely medical and financial records such as credit card numbers, credit scores and bank account numbers, but also addresses and phone numbers, social security numbers, birthdays and in some cases purchase history – information that almost every single company normally keeps on their clients.

"We Did Our Best" Is No Longer An Acceptable Answer

With millions of cyber criminals working daily to hack systems, and with employees accessing more and more confidential client data, there is no known way to absolutely, positively guarantee you won't have a data breach. However, your efforts to put in place good, solid best practices in security will go a long way to help you avoid hefty fines. Here are some basic things to look at to avoid being labeled irresponsible:

- Managing access. Who can access the confidential information you store in your business? Is this information easily accessible by everyone in your company?
- IT security and passwords. The more sensitive the data, the higher the level of security you need to keep on it. Are your passwords easy to crack? Is the data encrypted? Secured behind a strong firewall? If not, why?
- Training. One of the biggest causes for data breaches is the human element: employees who accidentally download viruses and malware that allow hackers easy access. Do you have training to help employees understand how to use e-mail and the Internet responsibly?

Shiny New Gadget Of The Month:

'Peep' The World **Around You**

Peeps by CarbonKlean is the ultimate cleaning tool for glasses - far better than your traditional rag, spray or Tshirt. It's compact, easy to use and, most

importantly, revolutionary in its ability to not only clean smudges off your glasses but also protect them from the next smudge.

Peeps uses state-of-the-art carbon molecular technology to remove smudges and dirt at a microscopic level as well as keep your lenses clear of contaminants long after you use it.

To clean your lenses with Peeps, simply brush them to remove dust and particles, wipe them between the heads of the tongs and enjoy your crystal-clear vision!

How To Succeed In Business And Life In Just 8 Hours Per Week

Do you want to know my secret to success - how I'm able to live the way I do after growing up in a dysfunctional family, lasting half a semester in college and possessing no special skills, talents or intelligence? Well, I do two things that most people don't do: I study and I plan.

I pull these two levers once every day (and twice on Sunday), and that's what has led to three decades of success. You can follow my example. Like all fundamentals of success, the daily disciplines of studying and planning are easy to understand, but hard to maintain in practice. Most people don't have discipline, and, therefore, they do not succeed. What's more is that in total, you only have to study and plan for eight hours every week! Curious about how that works? Let me break it down for you.

Early each morning, I give myself an hour to study and plan as needed. No matter how early the rest of my day starts, I always start with this hour - no exceptions.

I devote the first 30 minutes to studying. When I say "studying," what that basically means is that I'm reading a book to grow one of my core skills. Don't spend that first 30 minutes reading useless crap; only focus on books that will help you grow in some way.

If your response to that idea of studying was that you don't have time to read, then I would say you're lying. Bill Gates, Warren Buffett, Oprah Winfrey, Elon Musk and Jack Ma are all voracious readers. Do you think you're busier than them? Yeah, thought not. They're not the only ones either - the average multimillionaire reads at least two books a month. And guess what? I can get through that many books in a month by reading just 30 minutes a day.

I spend the remaining half of the first hour of my day planning. That means I review my MVPs (most valuable priorities) and walk through my day in my head.

Thinking about how I might interact and empathize with people helps me grow my emotional intelligence.

It's also during my planning time that I identify my spotlight moments - the moments when I know my example is on display, where I need to maximize my excellence. Want to know a little secret? Being excellent isn't about trying to be incredible at everything all the time - it's about picking the right moments to maximize your effort and be disproportionately excellent.

So, altogether, if you do those two things for an hour each day, that's seven hours. The eighth hour happens on Sunday afternoon, when I plan out my week. And that's it. That's how you get a massive edge over your peers in whatever you're doing. Too few do it and stick with it, and that will make it all the easier for anyone who does stick with it to succeed.

Authorities Seize Largest Stolen-Login Marketplace Site On The Dark Web

Earlier this year, the Department of Justice announced that they, along with other international authorities, had seized Slilpp, the largest site for stolen login credentials on the Dark Web. The site had over 80 million user credentials lifted from 1,400 service providers.

Authorities from four different countries all helped the FBI seize servers that hosted Slilpp. They also arrested and/or charged 12 people involved with operating the site.

Eighty million user credentials from 1,400 sites is a lot of sensitive information. That said, though, the Department of Justice still hasn't ascertained the full impact of the illegal activity on Slilpp. In the U.S., activity on the site led to almost \$200 million in losses – and that's just a tiny

fraction of the total activity. The fight isn't over, but this case is a big win against illegal login sale marketplaces. The Department of Justice hopes for more seizures like this one in the future.

The Best Tips For Training New Hires

The hiring process is stressful. You put in a considerable amount of work training someone for their role and

hope they'll become a responsible employee. As difficult as this process is, however, you can streamline it with these tips.

Create A Scalable Guide For New Hires To Follow

Document all the responsibilities of the role and put them together in a concrete guide for new hire. This documentation will work especially well for visual learners, for recent graduates who are used to learning through guides and for non-native English speakers. In truth, though, anyone can benefit from having a set of principles to refer to.

Draw Examples From Real Life

When training someone in what to do in a specific situation, provide actual examples of what you did in that particular situation in the past. New hires will have an easier time completing their work if they have a previous example that shows them what to do.

Develop Your Interview Skills

Like great teachers, great leaders ask great questions to surmise if new hires are understanding their role. This will ensure that nothing gets lost in translation throughout the on boarding process.

You're Vulnerable To RANSOMWARE If...
