

## Thompson Tank & Construction 2021 (ROV) Under Water Drone Tank Inspections

### DRONE BENEFITS

- TANK REMAINS IN SERVICE- NO DOWNTIME
- COST EFFECTIVE FOR LIMITED BUDGETS
- MINIMIZE TANK PREPERATION TIME AND COST
- DETAILED DOCUMENTATION- CAPTURED INSPECTION VIDEOS AND PHOTOS
- GREAT FOR GENERAL INTERIOR INSPECTIONS
- NO WATER LOSS

Thompson Tank offers Remotely Operated Vehicle (ROV) Underwater Inspection Services for situations that require inspection and monitoring of tanks while they remain in service.

This service utilizes a sanitized ROV with video camera and recording equipment to inspect all surfaces of the tank below the water level. This visual inspection process is applicable in several industry standards including NFPA 25, AWWA, and is the perfect solution for evaluating coating integrity without removing the tank from service.

Thompson Tank recommends having your epoxy coated water storage tank inspected every 3-5 years. Whether you need a periodic inspection, review of a structural concern, or analysis of your tanks service life, TT&C can fulfill your inspection requirements.
