

North Carolina A&T State University Corbett Intramural Complex

- Overlooking an urban intersection, this recreation center's expanse of glass curtain wall serves to display the vibrancy of campus life to passing traffic and to draw students to the activities contained within.
- The new, 26,925 SF facility features an open fitness area, aerobics dance studio, multipurpose rooms, and a health education area; all surrounded by a running track.
- The design features all lightweight construction materials to speed construction and ease future expansion. The bright blue entrance canopy creates the presence of a 1-level structure, while prominently displaying the university's colors.
