

# Elon University Sankey Hall

- New Atlantic worked with Robert A.M. Stern Architects, LLP and CRA Associates, Inc. to construct the new Sankey Hall for Elon University.
- The 3-story, 27,123 SF facility accommodates the significant growth of the Love School of Business. In addition to technology-infused classrooms and collaborative workspaces, Sankey Hall houses 2 new academic centers focusing on financial education and design thinking. The new auditorium features fixed seating.
- The structure is concrete spread footings and foundation walls; concrete slabs-on-grade; structural steel floor and roof joists; and light-gauge metal student roof trusses and steel floor and roof deck. The building envelope will be brick cavity walls with metal stud backup systems; cast stone bands and trim; sloped shingle roofs; aluminum windows and doors, and hollow metal doors and frames.
- The site features sidewalks, service area concrete pads, fences, and gates.
