PROJECT SUMMARY

SanTrac Technologies Inc. successfully completed a demarc extension and fiber optic installation project connecting the building demarcation point to the customer's office suite. The project included the installation of twelve-strand indoor/outdoor single-mode fiber, along with the necessary fiber termination, connectivity, and pathway infrastructure.

SanTrac provided and installed two (2) Corning Optical Closet Connector Housings, two (2) Corning Optical Panels

with duplex LC APC connectors, and smooth-wall orange innerduct at the demarc and IDF. The installation also included twelve (12) LC Senior Unicam single-mode connectors and a fiber-to-Ethernet media converter at the demarc.

All required miscellaneous materials were provided to complete the installation. Upon completion, SanTrac performed OTDR and optical power testing on all fiber strands to verify fiber performance and installation quality.

The project was successfully completed with the fiber infrastructure properly installed, terminated, tested, and ready for reliable network connectivity between the demarc and office suite.

SERVICES

- Installed a total of 2,178 ft and terminated 12 strands of single-mode fiber optics.
