PROJECT SUMMARY

SanTrac Technologies Inc. successfully completed an onsite security camera installation and surveillance system upgrade. The project included the installation of one (1) 48-channel digital video recorder (DVR), six (6) exterior 180-degree cameras, two (2) exterior dome cameras, one (1) teller overview camera, one (1) vestibule overview camera, and one (1) facial recognition camera.

As part of the upgrade, SanTrac removed the existing analog ATM overview cameras and consolidated the security camera system onto the new 48-channel DVR, replacing the existing recorder that could no longer accommodate the additional camera requirements.

SanTrac completed the required camera mounting, cabling, installation, and system integration work. The project was successfully completed with the security equipment installed, consolidated, and prepared for final commissioning and network integration.
