FOR IMMEDIATE RELEASE

BIS Announces Partnership with Southern Light

Robertsdale, Alabama – August 1, 2014 – Business Information Solutions’ CEO, Phillip Long, has announced a partnership between BIS and fiber optic network provider, Southern Light.

With BIS already possessing one of the widest arrays of information technology services in the market, the addition of a quality fiber optic provider was natural fit. Long said the partnership between BIS and Southern Lights is sure to be a high speed success.

“They are one of the few premium fiber optic providers in the local market we serve. A really great south Alabama success company,” Long said.

BIS currently supplies a broad assortment of information technology services, including Cloud solutions, Voice over Internet Protocol (VoIP) phone solutions, data backup and storage and network security, along with numerous other services. These services will be bolstered even further with the addition of the highly dependable and high-speed fiber optic networks provided by Southern Light.

Southern Light is the Gulf Coast’s leading provider of fiber optic networks and high-capacity transport solutions. With a focus on delivering affordable, high band-width services over their wholly-owned fiber optic network. Southern Light maintains a focus to keep clients connected to a network that is far from regular.

BIS has been providing elite IT services in the Gulf Coast area for over a decade, and looks to continue to build on that success and outstanding reputation with its newest partner. One other common link between BIS and Southern Light, besides premium networking and technology services, is their continued growth in success. Currently, Southern Light is listed as the 23rd fastest growing company in the state of Alabama.
