DATTO BACKUPIFY FOR 0365

Simple, automated and secure
backup of your cloud data.

BACKUPIFY O365 BACKUP

As the leading cloud-to-cloud backup solution, Backupify offers an all-in-one backup, search, restore, and export solution for Office 365. Backupify ensures that you can access, control, and most importantly **protect** the data you entrust to the cloud.

As companies increasingly move data into cloud-based applications, many IT administrators think traditional best practices such as data backup are outdated. After all, a SaaS application is always available, accessible from anywhere, and highly redundant, so why is backup necessary?

An astonishing **1 in 3 companies report losing data** stored in cloud-based applications. That means the permanent deletion of potentially hundreds of work hours.

The truth is even data in cloud-based applications is vulnerable to:

- **Viral damage or ransomware attacks**
- **Accidental end-user deletion**
- **Malicious end-user activity**
- **Operational errors such as accidental data overwrites**
- **Lost data due to canceled account subscriptions**
- **Misbehaving application workflows**

With more and more companies depending on cloud applications, these risks are impossible to ignore. That means that best practices like data backup are just as important in the cloud as in traditional on-premises IT systems. An independent data backup separated from the app itself is necessary to avoid the most common data loss pitfalls.

WHY O365 BACKUP ISN'T ENOUGH

While Office 365 does include primitive restore capabilities for lost data, two major issues arise when using their tools: lost data and lost time.

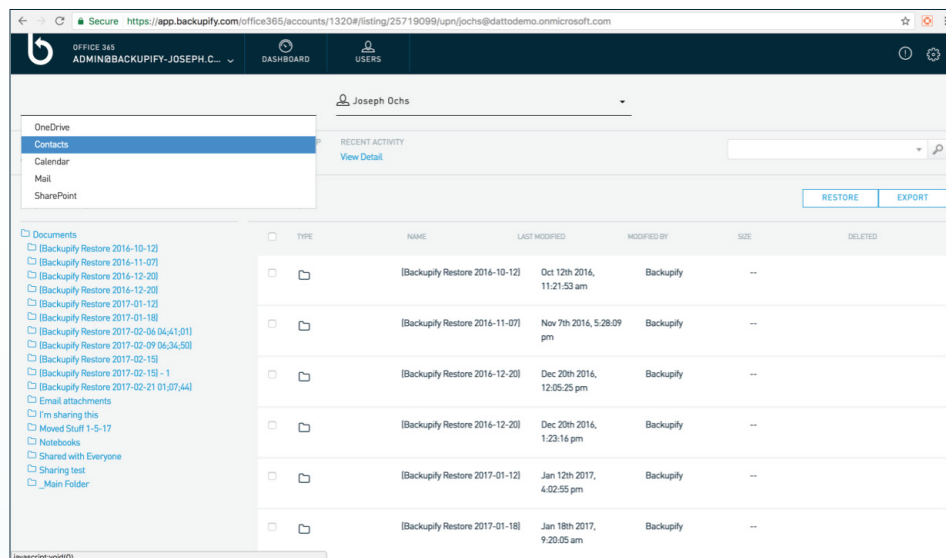

- **Data loss due to inactive licenses:** As one would expect, an active Office 365 license is required to access O365 data. Unfortunately, inactive or deprovisioned user data is permanently deleted, and there is no rollback option.
- **Data loss due to permanent deletion:** When a SharePoint Online administrator deletes a site collection, all data will be placed in the Recycle Bin where it is kept for 93 days. At that time it is automatically and permanently deleted, and there is no rollback option.
- **Data loss when restoring files:** When restoring older files from a SharePoint backup, the restore is targeted at the same URL. This means a restore overwrites whatever data currently exists in the site collection, and there is no rollback option.
- **Time lost in restoring files:** Contacting Microsoft Support for assistance with possible data loss issues and restore options after identifying the proper previous version is very time consuming.
- **Time lost finding and restoring files:** Contacting Microsoft Support for assistance with any data loss issue can be time consuming, and still may not result in restored files.

WHY BACKUPIFY?

Trusted Backup

Skip the uncertainty and know your Office 365 data is backed up with high-performance cloud-to-cloud backup infrastructure. Reduce risk and spend more time on your business.

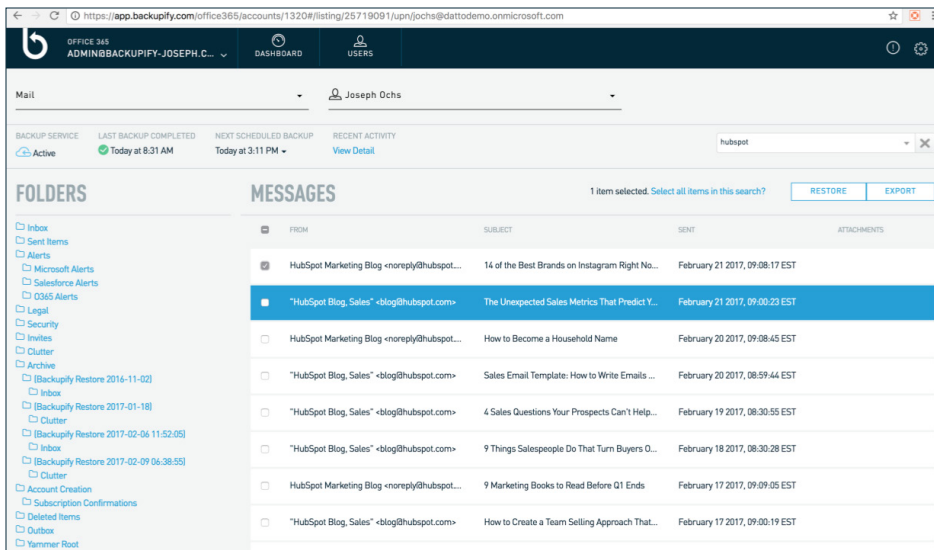

- **3x/day backup:** Rest easy with Datto Backupify's automatic 3x/day backup for Office 365's Exchange, OneDrive, and SharePoint.
- **On-demand backup:** Perform additional backups as needed at any time. Running an on-demand backup will not affect the three regularly scheduled backups.
- **Backup notifications:** Get notifications at a glance, right on the dashboard, about all backup information.
- **Infinite Retention:** Store an unlimited amount of data in the Datto Cloud for no additional fees.

Effortless Restore

Easily avoid business downtime with a quick one-click restore process. Quickly identify and recover individual items or entire folders without overwriting existing files.

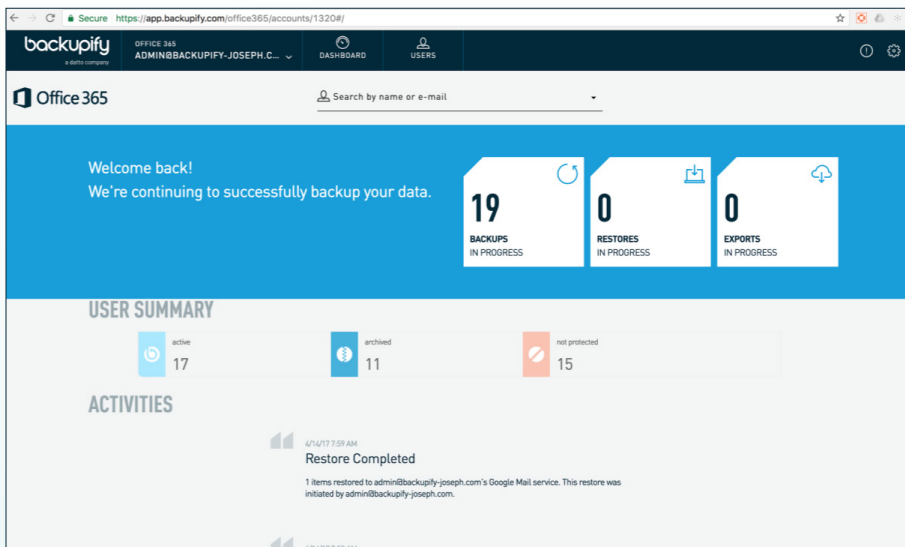

- **Non-destructive Restore:** Restore data without overwriting existing files or site collections targeted at the same URL.
- **Item level restore:** Retrieve data in the original format with file and label structure maintained in the backup.
- **Retain user data:** Save money and administrator effort by automatically holding inactive users' data forever.
- **No overwrites:** Prevent data overwrites and differentiate restored data from current Exchange, OneDrive, and Sharepoint production data for added protection.
- **Advanced search capabilities:** Easily find data with advanced search option and restore individual items or entire folders.

Security and Reporting

Balance security and transparency with powerful security controls and robust user lifecycle management. Protect valuable business data from accidents or malicious acts.

- **Security and compliance:** Protect business data knowing you're in compliance with Service Organization Control (SOC 1/ SSAE 16 and SOC 2) reporting standards.
- **Activity log:** Maintain a detailed record of all administrator and user actions.
