

Extend business reach. Reliably and securely.

Connect virtually anywhere

Your business needs to be wherever your customers are. Conducting business in today's highly mobile world means providing data services beyond the limits of traditional wireline connections. You also need a cost-effective way to provide an extra layer of protection to ensure business continuity.

Business Connect Plans for Wireless Wide Area Network (WWAN) enables data networks in locations where wireline connections are not available. You also gain peace of mind knowing that you have true backup connectivity through the AT&T wireless network.

Cost-effective connectivity

With AT&T LTE performance and availability, you can instantly set up a network almost anywhere you need one. Connect kiosks, popup retail, digital signage, ATMs and auxiliary networks in areas where wired connections are not feasible.

Flexible solutions

Select from a range of data service plans to fit the unique needs of your business. For enterprises, AT&T's Commercial Connectivity Service (CCS) securely extends the reach of corporate networks to mobile devices and remote workers.

Benefits

- Achieve highly reliable 3G/4G wireless network connectivity
- Protect data through secure wireless transactions
- Extend business operations with fast and flexible wireless solutions
- Cost-effective data service plans meet your unique needs

Features

- Stand Alone and Pooled Plans available with CCS
- Improve failover and business continuity during cable, DSL or T1 outages
- Security-enhanced back-end connectivity between WAN and the AT&T cellular network
- Conduct business in areas where wired connections are not available
