Effective Service at a Reasonable Price

ASC group is my choice for an IT company and I would recommend them to anyone that desires state of the art IT service. My company had experienced multiple IT issues with our previous IT provider. Poor service, inefficient hardware/software, questionable IT recommendations and lax backup protocols. I thought we could deal with all those issues because their service was "cost effective." Then, as a direct result of our IT provider we experienced a very troubling security issue. That's when we called ASC Group. After several months of dealing with that nightmare they finally helped us resolve the issue. I realized cost effective does not equate to the cheapest service but to effective service at a reasonable price. You get what you pay for!"

Big-Company Protection Despite for Small Businesses

ASC Group doesn't cut corners. They stay at the cutting edge of technology, and use it to protect the reliability and, most importantly, the security of our network. They don't allow us to use cheap or easy shortcuts, and as a result, we have big-company levels of protection despite being a small business. In the dangerous digital environment we live in nowadays, this is essential.
