

# Are You Gambling with Your Data?

Are you taking an expensive gamble with your firm’s critical data and network security? If you’re like many RIA executives, you can’t confidently say “Yes” to the following basic security questions. That might mean you’re putting your firm and your clients at risk?

	Yes	No	Don't Know
Is your data being backed up daily to a secure, remote location?			
Do you conduct a test restore of your data once a year, and report to validate all the data is there?			
Do you know how fast your network could be back up and running if your server broke down or a disaster happened?			
Do you know how to access your data in an emergency, even without your IT person?			
Does your receive monthly reporting to verify your network is monitored for hackers, viruses and attacks?			
Do you use 2 factor authentication when working remotely?			
Do you use secure single sign on for all web based applications?			
Do you avoid publishing your employees email addresses on your website?			

Not sure what the answers are to some of these questions? Want to be sure your data and network is secure? Contact us to find out what your next steps should be.
