“With RCImedia’s help, we were able to improve our internal training process and replace outdated video equipment and give our VETS quality sound and viewing capability as they learn to integrate successfully back into the community”

Jeff Kendricks
Executive Director
MCVETS

Maryland Center for Veterans Education and Training Center

Challenges

- Design and Install a cost effective training solution in an existing training space. A new system we had to take into account the large open format space used for the training. This space was approx. 1000sq ft., with a 20 ft. open ceiling with skylight. This large space has a left and right wing that is slightly visually hampered by four (4) 2 by 2 column
- The system had to be able to engage up to 50 residents that use the training are for various training programs including sound, video, presentations

Solution

- Update display media with a Da-Lite Contour Electrol 123” diagonal electric screen, mounted on a 16ft high ceiling beam to ensure the perfect size image is visible from all areas of the space.
- Procured a projector that was bright enough for the space, while allowing for low maintenance for the client with a Panasonic PT-RZ370U Solid Shine DLP Projector to cut down on bulb replacements.
- Because the space has a left and right wing that is slightly visually hampered by a 2 by 2 column, so we incorporated two (2) 60” Flat screen monitors to cover those spaces. In these spaces we used two (2) Sharp AQUOS LC-60LE660U flat screen monitors.
