

## MCT 1000 AND MCT 2000 - CASH MANAGEMENT INTERNATIONAL

**THE money changing machine and payment systems manufacturer Cash Management International, introduces two new ATMs.**

The MCT 1000 is a compact multi-cash terminal for the VLT market. Controlled using the 10ins touchscreen, it will accept notes from €5 to €500 and its cashbox has a 1,000 notes capacity. The MCT 2000 is SAS ticketing compatible and approved for use with the Apex casino management system. Also with a 10ins touchscreen for controlling, this multi-cash terminal comes with an optional safety package, which includes a VDS alarm system, gas break-in protection and an integrated video camera.

## SMART HOPPER - INNOVATIVE TECHNOLOGY

**THE SMART Hopper is the new multi-coin hopper and recycler from Innovative Technology.** The mixed-coin capacity of the SMART hopper eliminates the need for multiple hoppers and sorters, reducing the cost of handling coins internally. Capable of paying out 12 coins per second, it proves efficient as well as versatile, the company said. The host machine sets the desired coins needed for payout and transfers any unwanted coins into the cashbox. The desired float level is set before collection so all excess coins travel straight to the cash box. This self-regulating float ensures the host machine is able to payout as necessary while easing operator refill and collection.

## MINI TRAIN - UNIS

**KIDS can live out their dreams of being a train driver with UNIS Games' Mini Train.** The mini express train features smoke effects, whistles and an interactive mini game to play while the ride gently rocks. The realistic smoke effects are safe and, the juice that creates it, easy to replace, and will grab the attention and imagination of younger children, the company said.

## VIKING - VNE

**VNE presents its latest change machine, the Viking.**

Equipped with the latest CashCode bank note recycler, Bill-to-Bill 200, the Viking can dispense up to 200 notes, while also changing notes to coins and vice versa. VNE has combined mechanical, electronic and online security in this cash machine. Its door comprises two separate sheets of steel, while its biometric reader removes the need for multiple keys, as the owner decides on the access level for each member of staff. As with all VNE change machines, remote surveillance and real-time accounting and service are standard. Viking can be controlled from every browser and alerts can be sent to notify of errors or theft. Equipped with a GPS system, anyone who can steal the 150kg machine, can be tracked.

## ARDAC ELITE - CRANE PAYMENT SOLUTIONS

**CRANE Payment Solutions offers one of its "most advanced products" in the Money Controls Ardac Elite.** This note validation machine uses imaging technology that monitors 20,000 data points for every note inserted, looking at the complete note. This means increased security and very high acceptance rates, accepting 'street money' in virtually any state, and inserted at virtually any angle. Ardac Elite boasts the unique "last bill" technology. If there are any disputes about the last bill entered, plugging in a PDA via the USB port shows an image of the last bill.
